QUESTION 87 You are the administrator for a Microsoft Visual Studio Team Foundation Server (TFS) installation at your company's headquarters. Some of the company's development work is performed offsite at a location with slow Internet access. You set up a version control proxy at that site to lower the response time for those users. You need to identify the cache hit ratio of the version control proxy to ensure that it meets a minimum service level. What should you do? A. Read the performance counters of a client machine. B. Start the client development environment with the /log option, do some work, and then read the log. C. Access the ProxyStatistics web service of the version control proxy machine. D. Read the contents of the ProxyStatistics.xml on the TFS server. Answer: C Explanation: [http://msdn.microsoft.com/en-us/library/ms400683\(v=vs.100\).aspx](http://msdn.microsoft.com/en-us/library/ms400683(v=vs.100).aspx) QUESTION 88 Drag and Drop Question Your team uses Microsoft Visual Studio Team Foundation Server (TFS) to manage automated builds. You want to change the drop location of a build definition during a single execution of the build. All subsequent builds for that definition should use the drop location currently defined. Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order

Actions	Answer Area
Update the Drop Folder setting on the Build Agent properties.	
Edit the build definition, and update the Drop Folder argument.	
Queue the build.	
From Team Explorer, right-click the build definition, and select Queue New Build.	
From the Queue Build dialog box, update the Drop Folder for this build argument.
